All uni-chains belt systems are available in a raised rib version that can be supplied with match-ing- finger plates also called combs. The finger plates are supplied with cover caps which can be attached when the finger plate has been installed. The cover caps can be removed by using a screwdriver that can be inserted- between the cover and finger plate. In order to adjust to belt width variations caused by temperature fluctuations. a slider facilitates the sideways move-ment of the finger plates.
